A - Z

FEBRUARY 1930 - AUGUST 1946

The Classified Index is not a substitute for FORTUNE's detailed cumulative index. Rather it is designed as a simple bibliographical reference guide and is based on the kind of request for lists of articles that has come from students, veterans, businessmen, teachers and officials who turn to FORTUNE's files for current and comprehensive reviews of their fields.

In Using the Index

The subject sequence of the A-Z bibliographies appears on the next few pages. However, the reader may also want to refer to the alphabetical guide, *pages 133 - 139*, since it gives specific subjects and subheadings grouped under the major category divisions in the body of the Index.

To reduce cross-reference handling to a minimum, many articles have been listed under more than one category heading. The cross-references given are mainly designed as suggestions for exhaustive study of a subject.

For instance:

A study of steel processes should logically carry back from STEEL to MINING & METALLURGY which contains articles on iron ores.

General articles on U. S. FOREIGN POLICY are closely linked with those under FOREIGN COUNTRIES, most of which contain sections on relations between the given country and the U. S.

Changes in the U. S. public's attitude toward a specific country — Germany, for instance, — appear in the FOREIGN POLICY section under *Surveys*.

The notations, inserted where titles are not self-explanatory, are designed to help cull material from each category, especially when using the cross-references.
